## MFR 012

- > Efficient condensation control
- > Adjustable relative humidity range

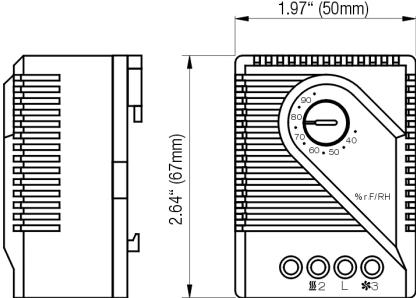

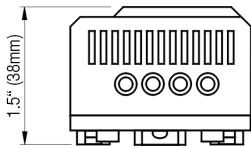

- > High switching capacity
- > DIN rail mountable

The MFR 012 electromechanical hygrometer is designed to control the relative humidity inside enclosures. When connected to an enclosure heater (dehumidifier), it will energize the heater at the humidity set point in order to raise the dew point. This helps prevent damage and malfunction of electronic components caused by condensation and corrosion.<sup>1</sup> The MFR 012 can also be used to control cooling fans, warning lights or other devices.

<sup>1</sup> The critical relative humidity level for most components is 65 %. Above 65 % RH, condensation can form and cause malfunctions of electronic equipment. Long term, this can lead to corrosion and permanent damage of electronic components and systems.
